FINISHES

German Physiks loudspeakers are available in the following finishes:

Wood

High Polish

Carbon Fibre

Loudspeakers in the High Polish and Carbon Fibre finishes are coated with a multi-layer lacquer that is hand buffed to a high gloss. Depending on the finish, between 4 and 16 layers of lacquer are applied. This produces a thick coating that allows most scratches and other surface damage to be relatively easily repaired. Light scratches may be simply polished out. Heavier scratches may be repaired by applying lacquer over the damaged area and then polishing this back.

This brochure illustrates our standard veneers. We make every effort to match the finish on a set of loudspeakers as closely as possible, but because veneers are a natural product there will inevitably be some minor variation in grain and colour which is beyond our control.

Custom veneers are available on request. Please contact your German Physiks dealer for more details.
